Installation

Mounting

1. This driver must be installed in a well-ventilated area free from explosive gases and vapors. Air circulation is essential for heat dissipation.
2. Recommended spacing between LED drivers should be a minimum of 4" (100mm).
3. Do not mount driver close to or above objects that can radiate heat. Vertical mounting is highly recommended.
4. Select an appropriate location that is able to support the weight of the product.
5. Use the mounting tabs on the left and right side of the driver to mount the product.

Vertical mounting

Connection Preparation

Only use certified components in accordance with national and local electric codes.

Input Connections & Grounding

Ensure power is disconnected at the source

Route line voltage input wires and ground wire through strain relief and knockout.

Connect black input wire (L) and input wire (N) to line voltage.

Connect green wire (ground) to input ground wire.

Output Connections

Route low voltage product wires through strain relief and knockout.

Securely connect driver's black wire (-) and red wire (+) to low voltage product, matching polarity.

If available, route 0-10V/1-10V dimming wires through strain relief and knockout.

Connect pink wire (-) and purple wire (+) to dimmer, matching polarity. Secure wire compartment cover when completed.

Using TRIAC/Phase cut dimming

1. Through a phase-dimmer or lighting system, control the input AC phase line (L) and adjust the output PWM
2. Triac dim mode: Forward phase & reverse phase, MLV, ELV dim
3. Please try to use dimmers with power at least 1.5 times as the output power of the driver.
